

HashiCorp Packer

- Open source tool for creating **identical machine images** for multiple platforms* from a single configuration
- **Golden Images**: Secure, Immutable OS images that are needed especially in Enterprise world where compliance issues matter
- **Keep all dev/test/prod environment similar** as possible, the app stays the same, just the backing services change like the database, the LDAP, the config..
- **Auto-scaling Acceleration** : Launch completely provisioned and configured instances in seconds, rather than minutes or hours
